BACKEND ENGINEER DEV OPS API DEVELOPMENT

Skilled developer with a deep understanding of Java, Spring Boot, Backend development and a foundational understanding of front-end development.

Technical Skills

- **Languages:** Java, SQL
- **Version Control:** Git
- **Frameworks:** Spring Boot, Hibernate
- **Databases:** MySQL, PostgreSQL
- **APIs:** REST
- **DevOps & Cloud:** Docker, AWS (EC2, S3), Nginx, CI/CD, GitHub Actions

Education

IIMT College of Engineering, Greater Noida
Bachelor of Technology

Mar 2020 – Mar 2024

Certifications

Java SpringBoot, Hibernate and JPA

Ducat

Professional Experience

SDE I

July 2024 - Dec 2025

Pearl Org. - Dehradun, UK

Responsibilities:

Backend Development:

- Spearheading the development of scalable backend applications using Java, Spring Boot, Hibernate.
- Collaborate with global clients to translate business needs into robust technical solutions, reducing project turnaround time by 30%.
- Optimize database performance by implementing efficient indexing, query optimization, and caching for improved system responsiveness.

API Development:

- Design and implement RESTful APIs for payment processing and hotel booking systems, improving response times by 40%.
- Build a society management solution covering modules for rent, bills, parking, and a full-fledged Employee Management System.
- Integrate authentication and security mechanisms using OAuth, JWT, and Spring Security, ensuring secure and controlled access to APIs.

Application Deployment & DevOps:

- Deploy and manage applications built in React, Angular, Java, and PHP on Linux-based servers using Nginx, Apache and AWS EC2,S3 and LightSail to maintain uptime by 95%.
- Used Nginx built in load balancing service for back-end applications.
- Implemented Docker-based containerization on Linux environments and other hosting platforms, improving deployment efficiency by 50%
- Amazon Amplify for deploying Flutter web applications
- Automate CI/CD pipelines using GitHub Actions, reducing deployment errors by 60% and accelerating release cycles.

Projects

Casham Salone

- Designed and developed the complete application logic structure. Integrated custom payment solutions with foreign banks.
- Deployed the application on a Ubuntu VPS server using Nginx as a reverse proxy and implemented load balancing.
- **Tools: Spring Boot | PostgreSQL | Nginx | Load Balancing | Linux Deployment**

Pilling App

- Built the full backend logic from the ground up.
- Integrated external payment APIs and OTP-based user verification.
- Developed an employee management system within the admin panel.
- **Tools: Spring Boot | REST APIs | Payment Gateway | Third Party APIs**

Codementee App

- Designed and implemented a CI/CD pipeline for microservices architecture.
- Utilized DockerHub and GitHub Actions for continuous integration and deployment.
- Managed automatic scaling, fallback strategies, and container orchestration with Kubernetes.
- **Tools: CI/CD | DockerHub | GitHub Actions | Kubernetes | Microservices**

TAMO DVR App

- Analyzed and identified open ports on dashboard cameras using Nmap to detect available FTP and RTSP services for media stream integration.
- Researched and implemented HTTP-based control commands to enable functionalities such as stream switching, camera toggling, and recording initiation directly from the app interface.
- **Tools: Nmap | FTP/RTSP Integration | HTTP Control APIs | Embedded Systems**

Modulator

- Designed and developed a custom data modulation/processing utility focused on efficient transformation and validation of structured inputs
- Implemented modular, reusable components to keep the system extensible and easy to reason about
- **Tools: Java | Git | Github**
